

Ideal for card-present retail, mail and telephone order and recurring payment merchants. The PCAuthorize® software is a stand-alone application that integrates credit card authorization and electronic settlement into your sales system.

A proficient system adept at handling any scenario, from the single user to the multi-user, multi-merchant integrated system.

The many features of the PCAuthorize software include:

- Multiple payment types:
 - All major credit card types
 - Private label cards
 - Check guarantee transactions
- Online, on-demand authorization
- Batch authorization
- Transactions are edited as they are entered with immediate error feedback
- Electronic Draft Capture support allows easy draft capture settlement regardless of the method used by the bank network
- Supports additional sale information such as item descriptions, invoice number, and customer number
- Address verification is supported for Mail Order merchants
- Works with magnetic stripe readers for card-present/retail
- Displays totals for batches including outstanding counts, authorized counts, counts by card type, settlement and discounted totals
- Create, delete, import, export and other transaction/batch management functions
- Supports Windows Dynamic Data Exchange (DDE), allowing easy access for many other applications. Finds batches and transactions by various criteria
- Hub versions of PCAuthorize can serve multiple users over a network, or be integrated into point-of-sale or order-entry applications for back-end payment processing.
- Supports receipt printers for credit charge slips, transaction detail reports, and batch summaries
- Many functions and setup may be password protected so unauthorized personnel cannot obtain access
- Support for a large number of certified networks
